

RadioPro Solo

*Simplicity that users expect.
Functionality that radio administrators require.*

RadioPro Solo provides a virtual radio on your Windows® desktop or Notebook while focusing on simplicity for the user. It allows remote access to Motorola MOTOTRBO radios via IP so that users can stay in “radio” contact.

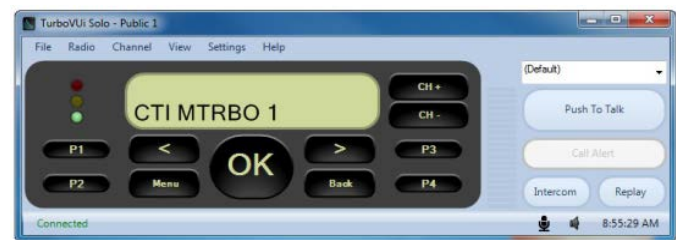

This is an economical solution in an office environment when using a radio is too expensive or involves too much additional hardware:

- Supervisory or centralized remote monitoring of radio channels
- Solves poor radio communications in underground or other facility dead zones
- Low-cost and easy-to-implement alternative to tone remotes for radio sharing
- Use when temporarily outside of radio coverage, such as a home satellite office or travel away from the site

Features include:

- Talk and listen using any Windows® PC
- Group and private calls with radio subscriber units
- Text Messaging
- Cross-muting with other users in the same room
- Voice and event logging for previous 24 hours
- Full radio control, including channel-steering and scan settings

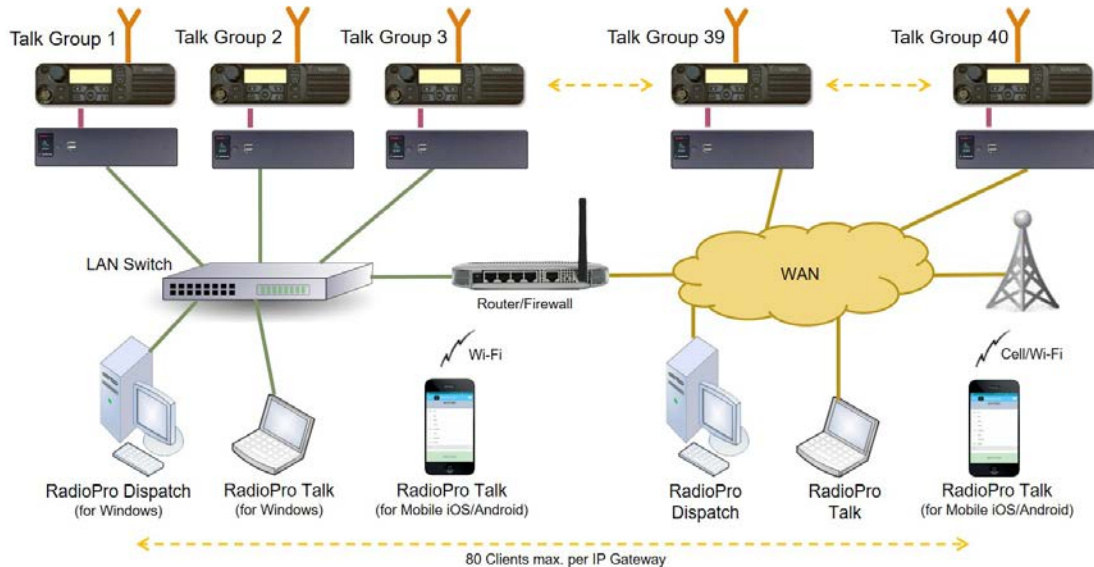

Supported accessories include USB, wired, and Blue Tooth microphones and headsets, as well as touch screens and foot switches for PTT.

RadioPro Solo

RadioPro System

As shown in the diagram below, a RadioPro system may have a mixture of client types; Dispatch, Solo, Talk, and Talk for Mobile. The IP Gateways interface the radio system to an IP network, ensuring easy wide-area deployment without purchasing and configuring server PCs.
