
8.1.8 (Nov 9, 2017)

- Remove two non-functioning features when right-clicking on a map; What's this address? Find address.

8.1.6 (AUG 3, 2017)

- Added feature to transmit only tone (without dispatcher voice).

8.1.4 (FEB 17, 2017)

- Added new custom action button configuration for GPS Update. The "GPS Update" button in subscriber list can now be configured with a different action.
- New feature to send email or text notification when receiving emergency signal.
- Moved all emergency configuration from General to its own "Emergencies" category.

8.1.3 (FEB 14, 2017)

- Added audio config option to "Mute duplicate audio streams from the same radio source". This may happen if a radio keys up the system and multiple gateways pick up the same call. This feature will reduce echoing of the 2 calls playing at the same time.

8.1.2 (FEB 1, 2017)

- Added support for Delcom USB IO device for turning on/off relay whenever the dispatcher is PTTing.
- Add minimum volume settings to Audio Config. This will prevent the dispatcher from muting select/unselect/mic volumes.
- Added options in Options->Dispatch Settings->Toolbar Buttons to show/hide Mic/Select/Unselect volume sliders.
- Fix URL formatting for streetview. Before, a non-english PC could format lat and lon as "80,0" instead of "80.0" (commas instead of decimals). The google streetview url only accepts decimals and not commas.

8.1.1 (DEC 8, 2016)

- Updated subscriber grid and subscriber list to show the hangtime state.
- Removed KryptonPageClassReflector. This was causing tab pages names like "voice" and "gps" to be translated into french.
- Added some translatable items.

8.1.0 (Nov 11, 2016)

- Multilanguage support add for French.
- Remove Snap-to-Road mapping feature since no longer supported by Google.

8.0.10 (OCT 14, 2016)

- Fixed issue: GPS summary report would include all subscribers even if only one was chosen.

8.0.9 (AUG 30, 2016)

- Fixed incorrect details for RX Group call in Recent History Window.
- Fixed issue where all gateways would show “Not enough licenses” even though Dispatch was licensed correctly.
- Added new scrollable Channel/Zone selecting window when the number of channels and zones exceeds 20.
- Archive Viewer: Prevent exporting if no export location is selected.

8.0.8

- Add Subscriber Grid Panel.

8.0.7

- Prevent dispatch from logging into the gateway until after a dispatch user has been selected. Prevents multiple logins per gateway.
- Fixed bug: Recent history was not showing any text messages.
- Fixed bug: Receive text messages were not being recorded in database.
- Fixed bug: Text message window was not scrolling down to bottom when receiving or sending a new message.
- Fixed bug: After closing the viewer, the viewer would stop the database from logging more events.
- Pressing the search button now auto flushes the database so you are always looking at the most recent data. Before it would take up to 15 seconds before data would show up in the database viewer.

8.0.6

- Fixed bug: Channel name at top of channel resource not showing the correct channel name when other channels are invisible.
- No longer storing gatewayIPAddress in searchable database.
- Fixed bug: Radio Check was not returning correct gateway of a subscriber
- RadioCheck can now be configured with custom actions. This will help trunked systems.

8.0.5

- Fixed bug: GPS was ignoring movement of speeds under 1mph.

8.0.4

- Added support for Buddymic ElbowSwitch 7G.
- Fixed bug: Emergency button on ribbon doesn't show radio alias.

8.0.3

- A new confirmation window is displayed before initializing an emergency from the custom action button.
- Fixed bug: Audio is transmitted multiple times when using an action button and the same channel is visible on multiple tab pages.
- Added additional logging for the DB Manager if the SQLite database could not be created.

8.0.2

- The Streetview feature had javascript errors preventing this feature from working. Streetview button now opens in browser and not in a form.
- Removed Yahoo maps because they no longer work.
- Turned GMap Route-Caching off. Causing 500K files to be stored on OS drive.

8.0.1

- Fixed bug: Audio was causing increased memory and threads. DedicatedThreadNotificationManager was being created for every audio stream.
- Channel volume is set to full and unmuted if emergency is received.

8.0.9

- Kenwood adapter would crash when receiving 0 for radio id.

8.0.0

- Must connect to gateway 8.0.0 or higher.
- Requires a Version 8 license key. Version 8 will not be able to connect to version 7 gateway because the gateway will not support encrypted passwords.
- Supports encrypted passwords when logging in. Must connect to gateway 8.0.0 or higher.
- Now sends DispatchLicenseId to gateway when logging in.
- Will use "DemoLicense" as the license Id when in demo mode.
- New Feature: Subscriber list PTT button is now configurable with a custom action.
- New Feature: Missed call PTT button is now configurable with a custom action. (For digital calls only. Analog missed calls will always work the same)
- New Feature: Added missed call configuration option: "Automatically remove missed calls" when transmitting a call.
- New Feature: Missed calls will now show how many missed calls of the same subscriber next to each subscriber.
- FindLocationFromAddress is defaulting to US addresses and not able to find a Canadian address.
