# RadioPro Talk™ Software

Simplicity that users expect.
Functionality that radio administrators require.

RadioPro Talk™ software provides the functionality of a virtual radio on your Windows® desktop or Notebook while focusing on simplicity for the user. It allows remote access to Motorola MOTOTRBO or Kenwood NEXEDGE radios via IP so that users can stay in "radio" contact.

Features include:

- Group and private calls with radio subscriber units
- Text Messaging
- Cross-muting with other users in the same room
- Voice and event logging for previous 24 hours
- Channel or Talk Group selection
- Configurable color schemes

This is an economical solution in an office environment when using a radio is too expensive or involves too much additional hardware:

- Supervisory or centralized remote monitoring of radio channels
- Solves poor radio communications in underground or other facility dead zones
- Low-cost and easy-to-implement alternative to tone remotes for radio sharing
- Use when temporarily outside of radio coverage, such as a home satellite office or travel away from the site

Supported accessories include USB, wired, and Bluetooth microphones and headsets, as well as touch screens and foot switches for PTT.

RadioPro™ System

As shown in the diagram below, a RadioPro™ system may have a mixture of client types; Dispatch, Talk, and Mobile. The IP Gateways interface the radio system to an IP network, ensuring easy wide-area deployment without purchasing and configuring server PCs.

Talk Group 1   Talk Group 2   Talk Group 3   Unlimited Talk Groups*

LAN Switch   Router/Firewall   WAN   Wi-Fi   Cell/Wi-Fi

RadioPro Dispatch (for Windows)   RadioPro Talk (for Windows)   RadioPro Talk (for Mobile iOS/Android)   RadioPro Dispatch   RadioPro Talk   RadioPro Talk (for Mobile iOS/Android)

* Max 80 Clients connected to 1 Gateway. Max 70 Gateways connected to 1 Dispatch Client.
