hospitality

RadioPro provides best-in-class VoIP for two-way digital radios to allow communication from anywhere on conventional or trunked systems. RadioPro combines the flexibility to solve any Radio-over-IP challenge, ease of wide-area system deployment, and cost savings over other solutions. Enhance radio system functionality with the following RadioPro software applications for Windows™ PCs and notebooks and smart mobile devices.

RadioPro Dispatch is a multi-channel Windows™ desktop console, with optional modules for GPS tracking, voice dispatch, text messaging, and more!

RadioPro Talk is a low-cost alternative to tone-remotes, giving its users the functionality of a virtual radio on a Windows™ desktop, while focusing on simplicity.

RadioPro Mobile, is available for iOS and Android devices, enabling mobile users communication with two-way radios using simple push-to-talk.

Improving critical dialogue between facility managers within hotels, casinos and banquet centers is essential for a streamlined guest services environment. Affordable and easy to use, RadioPro software can enable a vital link for enhanced connectivity, providing the industry with a solution for greater customer relations.

Whether a radio user is on a hotel or casino property, or traveling out of coverage between establishments, RadioPro Dispatch can enable office teams to easily communicate with their support staff and security personnel. Features such as superb audio quality, intuitive interface, selected and un-selected audio, missed-call tracking, instant playback, emergency call, and patching improve immediate communication for increased customer service and security matter preparedness.

In addition, when used with digital two-way radios, the integrated GPS module allows administrators to track the location of vehicles, such as security offers and guest shuttles. The GPS module will display radio users' position on a map as well as a status indicator to show whether a vehicle is stopped or moving and its location. Reduce time spent trying to locate these individuals and serve guests promptly.

CTI Products' RadioPro software includes the RadioPro Mobile application for iPhone and Android. This application allows users to reliably communicate with two-way radio systems from anywhere, twenty-four hours a day, seven days a week. Your security personnel's central office has never been more available.

Since all voice calls, text messages, and GPS data is logged to the database, reports and safety incident review are available. Administration teams can easily search, filter and review events recorded during a particular shift. Voice calls of interest may be merged together for a seamless replay of an incident. Reports are also available to show how long a driver stops at a location, a driver's speed during travel, a user's radio voice-call usage, and other important security data.

Key Features For Hospitality:

- Multi-Chanel Voice Dispatch
- iOS & Android Mobile App
- GPS/AVL Tracking
- Data Reports
- Archive Search & Filter
- Custom Action Buttons configured to call specialized security groups

CTI Products is pleased to announce the merger of two of its software applications. TurboVUi and RadioPro were introduced to provide digital two-way radio users with a means to enhance their digital radio communication. TurboVUi will soon be incorporated into **RadioPro** to strengthen our product offerings. RadioPro will offer all of the features and benefits TurboVUi users have come to expect, including the same high quality service.
