

# RadioPro Solo™ Software

*Simplicity that users expect.  
Functionality that radio administrators require.*

RadioPro Solo™ software provides a virtual radio on your Windows® desktop while focusing on simplicity for the user. The Solo application allows remote access to Motorola MOTOTRBO or Kenwood NEXEDGE radios via IP so that team members can stay “in radio contact”.

This is an economical solution in an office environment when using a radio is too expensive, involves too much additional hardware, or may cause RF issues:

- Supervisory or centralized remote monitoring of radio channels
- Solves poor radio communications in underground or other facility dead zones
- Low-cost and easy-to-implement alternative to tone remotes for radio sharing
- Use when temporarily outside of radio coverage, such as work-from-home solutions, a satellite office or travel outside radio coverage

Features include:

- Talk and listen using any Windows® PC
- Group and private calls with radio subscriber units
- Text Messaging
- Cross-muting with users in the same room
- Voice and event logging for 24 hours
- Full radio control, including private calls, channel-steering and scan settings

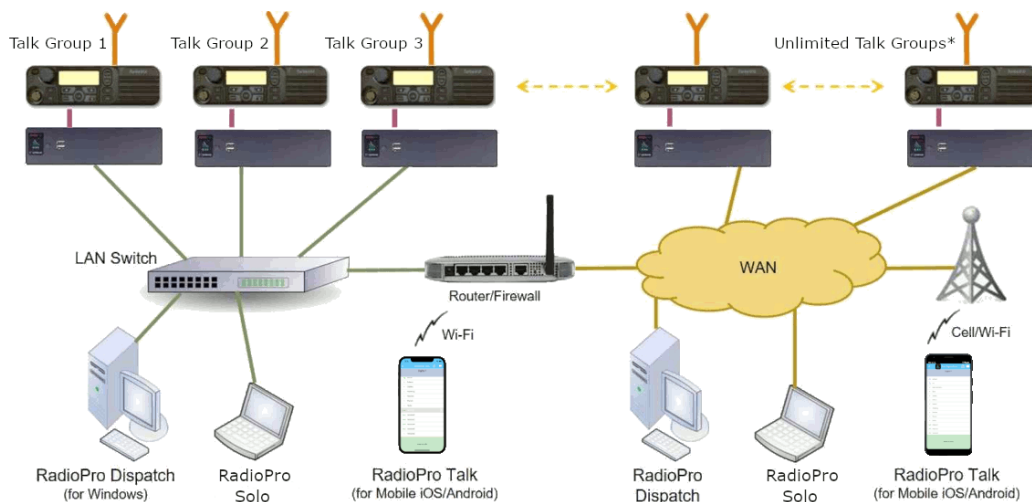

Supported PTT enabled accessories include desktop microphones, headsets, footswitches, and touch screens.

# RadioPro™ Solo Software

## RadioPro™ System

As shown in the diagram below, a RadioPro™ system may have a mixture of client types; Dispatch, Solo, and RadioPro Talk Mobile. The IP Gateways interface the radio system to an IP network, ensuring easy wide-area deployment without purchasing and configuring server PCs.

\* Max 80 Clients connected to 1 Gateway. Max 70 Gateways connected to 1 Dispatch Client.
